Requirements (F = functional, NF = nonfunctional)

ID	Name	Description
F1	Student registration	The system shall allow students to create an account by providing necessary personal and academic details, and optionally uploading resume.
F2	Student profile management	Students shall be able to view and update their profile, skills, and academic information. Admins shall also be able to view profiles of students and search and filter them.
F3	Internship listing management	Admins shall be able to add internships to the listings with necessary information including but not limited to company, role, domain, location, skills, and deadline. Students shall only be able to view these details. Filtration by at least these details should be supported for both students and admins.
F4	Internship application	Students shall be able to submit an application for a selected internship through the platform.
F5	Application tracking	Students shall be able to view the status of all their internship applications.
F6	Domain-based preparation	The system shall provide preparation resources and tests based on the domain of the selected internship.
F7	Test question management	Admins shall be able to add questions and sets of questions (tests) to the question database. Students shall be able to attempt given questions and tests. Students and admins shall be able to view and filter these questions and tests.
F8	Test submission and evaluation	Students shall be able to submit their completed tests through the system. The system shall automatically calculate and display the student's test score and percentage.

F9	Test result analytics	The system shall use the test results of a particular student to analyze strong and weak points and track progress.
F10	Test recommendation	The system shall recommend relevant preparation materials for the student's weak areas.
NF1	Privacy	The system shall not expose sensitive information such as student CPGA, passwords, applied internship data, etc. to unauthorized persons. For example, one student should not be able to access another's resume and applied internships without proper credentials.
NF2	Maintainability	The system should have a modular and well-structured design so that features can be easily updated or modified.
NF3	Encryption for passwords	The system shall encrypt all passwords when storing them in the database.
NF4	Usability	The system shall have an intuitive interface for both students and admins which doesn't need much explanation to start using.
NF5	Browser compatibility	The system shall support the common browsers, specifically Google Chrome, Microsoft Edge, Mozilla Firefox, and Opera.
