

Project title: Online Internship & Placement Preparation Portal

Group number: 15

Team profile:

- Samyuktha Ramesh Babu - PES2UG24CS437
- Shreya Narayana Bhat - PES2UG24CS483
- Sharvanee Naru - PES2UG24CS459
- Sanand Kumar Shetty - PES2UG24CS438

Proposed project description

We are going to build an online internship and placement preparation portal for universities, specifically geared towards placement officers and students. The product will provide a centralized platform for management of internship listings and applications, as well as provide students a portal for preparing for their internships. The material recommended to students can be customized towards their strengths and weaknesses based on previous performance on assessments and by domains of their interest.

Functional features:

- The system shall allow students to create an account by providing necessary personal and academic details, and optionally uploading resumes.
- The system shall allow admins to create an account only by approval from an admin account designated as head admin.
- Students shall be able to view and update their profile, skills, and academic information. Admins shall also be able to view profiles of students and search and filter them.
- Admins shall be able to add internships to the listings with necessary information including but not limited to company, role, domain, location, skills, and deadline. Students shall only be able to view these details. Filtration by at least these details should be supported for both students and admins.
- Students shall be able to submit an application for a selected internship through the platform.
- Students shall be able to view the status of all their internship applications.
- The system shall provide preparation resources and tests based on the domain of the selected internship.
- Admins shall be able to add questions and sets of questions (tests) to the question database. Students shall be able to attempt given questions and tests. Students and admins shall be able to view and filter these questions and tests.
- Students shall be able to submit their completed tests through the system. The system shall automatically calculate and display the student's test score and percentage.
- The system shall use the test results of a particular student to analyze strong and weak points and track progress.
- The system shall recommend relevant preparation materials for the student's weak areas.

Plan of work and product ownership

- Samyuktha Ramesh Babu: User profile and internship listing management.
 - Profile management: Creating a new profile (student or admin), viewing and managing details such as resume, skills, etc. on profile, filtering student profiles on the admin end.
 - Internship listing management: Viewing and filtering internship listing for both students and admins. Creation, updation, and deletion of internship listings for only admins.
- Sanand Kumar Shetty: Internship application management.
 - Interface to apply to internships for students. Interface must not allow submission of application if student is not eligible for an internship based on the internship's eligibility criteria.
 - Tracking of deadlines and status of applied internships.
 - Allow admins to view and filter applications from all students.
- Shreya Narayana Bhat: Placement tests and practice for students.
 - Question bank management: Storing questions and tests, along with their categories and difficulty level. Allow admins to add and remove questions and tests. Filtration of questions based on domain and difficulty level.
 - Placement test taking interface and evaluation for students.
 - Storing test results in the database for further processing in analysis.
- Sharvanee Naru: Test result analysis and material recommendation for students.
 - Perform analytics on results of a student's attempted tests, and allow students to view the results of analysis.
 - Based on these results, maintain the progress of a student and their strong and weak points.
 - Recommend placement practice material to students based on their weak points.
